🎓 EDUCATION

- Bachelor of Science
- Computer Science and Engineering
- The Ohio State University**
- 📅 2019 - 2023
- 📍 Columbus, Ohio

★ SKILLS

Languages

- TypeScript
- HTML/CSS
- Java
- JavaScript
- Kotlin
- SQL
- C++
- Python

Frameworks & Libraries

- React
- Next.js
- SASS
- JUnit
- Storybook

Developer Workflows & APIs

- Prompt Engineering
- RESTful APIs
- CI/CD Pipelines
- Git

👤 WORK EXPERIENCE

Playables Builder | Full-Stack Software Engineer

YouTube

- 📅 Oct. 2025 - Jul. 2026 📍 Mountain View, CA
- Established end-to-end client infrastructure for a flagship generative AI product, driving robust game creation tools for over 1,000 creators across the US.
- Designed a multi-page client architecture from scratch, increasing code modularity and accelerating cross-functional feature delivery speed.
- Engineered client-side state management for dynamic game assets and code files, reducing initial load times and minimizing memory overhead.
- **Synthesized user feedback from 30+ UX research sessions and design review meetings** to refine core principles, driving the UI architecture for the flagship product.
- Implemented telemetry flows across critical user journeys, increasing logging reliability for key UI elements.
- Stack: **Gemini, TypeScript, React, SASS, RESTful APIs, C++, SQL, Storybook**

Creator Verification | Full-Stack Software Engineer

Google Search

- 📅 Jul. 2024 - Oct. 2025 📍 Mountain View, CA
- Engineered an intuitive front-end verification flow, streamlining social account linking for 1M+ creators and improving onboarding conversion.
- Collaborated with UX researchers and designers to overhaul the UI architecture's usability and accessibility based on feedback from 10,000+ creators, leading to increased user engagement.
- **Developed a reusable UI component library with 30+ elements** to create consistent verification flows, improving maintainability of the codebase by reducing redundancy.
- Led a live experiment that analyzed data from 1000+ restaurants across the United States to identify top-rated dining establishments.
- Developed horizontal search badge labels to highlight trending results, boosting lower-page visibility and increasing click-through rates for 3M+ US users.
- Stack: **TypeScript, React, Kotlin, Java, HTML/CSS**

Interface Transformations | Front-End Software Engineer

Google Discover

- 📅 Oct. 2023 - Jul. 2024 📍 Mountain View, CA
- Supported the release of the Google Discover 'Notes' feature, **engaging 1M+ users in the US and India with real-time article feedback**.
- Developed a pre-publish client state validation layer on Discover to render live content previews, driving higher post completion rates and improving feed quality.
- Engineered dynamic grid layout architecture to aggregate real-time 'Notes' clusters, optimizing client-side rendering for 1M+ active users across global markets.
- Conducted image comparison tests on user visuals using automated testing tools, achieving near-perfect accuracy in validating user-generated content displays.
- Stack: **Java, Kotlin, HTML/CSS, JavaScript, JUnit, Git**
